DETAILED ACTION

1. Claims 1-20 are pending.
2. Claims 1,8, and 14 have been amended.

Response to Arguments

3. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection, Mi et al. (US Patent No. 6,418,472).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Mi et al. (US Patent No. 6,418,472).

Referring to the rejection of claims 1,8, and 14, Mi et al. discloses a method and system for operation of a computer system for identification tagging a document created by the computer system comprising the steps of:

calculating a function of the document (See Column 3, lines 7-16)

creating an identification tag by performing a cryptographic function on the function of the document and a unique processor identifier associated with the computer system, the cryptographic function producing an identification tag having the

Art Unit: 2137

characteristics that a third party possessing the document, the identification tag, and a plurality of unique processor identifiers, can determine a source of the document as a function of identifying the computer system and attaching the identification tag to the document (See Column 3, lines 17-33, Column 4, lines 1-20, lines 48-65)

Referring to the rejection of claims 2,9, and 15, Mi et al. discloses the claimed limitation wherein the function of the document is a hash function (See Column 4, lines 24-34)

Referring to the rejection of claims 3,10, and 16, Mi et al. discloses the claimed limitation wherein the relationship between a unique processor identifier and its associated unique processor associator is one of equality (See Column 3, lines 42-62)

Referring to the rejection of claims 4,11, and 17, Mi et al. discloses the claimed limitation wherein the cryptographic function is a Message Authentication Code (See Column 2, lines 53-58)

Referring to the rejection of claims 5,12, and 18, Mi et al. discloses the claimed limitation wherein the relationship between a unique processor identifier and its associated unique processor associator is that the unique processor identifier is a function of its associated processor associator (See Column 11, lines 8-26)

Referring to the rejection of claims 6,13, and 19, Mi et al. discloses the claimed limitation wherein the cryptographic function is based on modular exponentiation (See Column 8, lines 33-46)

Referring to the rejection of claims 7 and 20, Mi et al. discloses the claimed limitation wherein the unique processor identifier is stored in a processor of the computer system (See Column 2, lines 66-67, Column 3, lines 1-6, lines 47-62)
